

Our Vendor Audit Workshops can answer questions such as:

- > How does a PlanetOne VMS™ Program work and is it right for our organization?
- > Should we implement a Business Unit/ Practice Area focused VMS or an Enterprise VMS?
- > Where does the PlanetOne VMS™ save us money? What can we expect to save within the first 12 months and beyond?
- > How does the PlanetOne VMS™ Program track the life cycle of contractor acquisition? Can it streamline our processes?
- > Will we have access to contractor time reports and expenses through the PlanetOne VMS™ Program?
- > What processes are in place to consolidate vendors through the PlanetOne VMS™ Program?
- > Will I lose control if the PlanetOne VMS™ Program is established?
- > What can be automated via the PlanetOne VMS™ Program and what is still a manual process?
- > Who owns the PlanetOne VMS™ Program?
- > What costs are associated with establishing the PlanetOne VMS™ Program?
- > How do we track cost savings the PlanetOne VMS™ Program?
- > What steps are taken to achieve organizational adoption before, during and after establishing the PlanetOne VMS™ Program?
- > How quickly can the PlanetOne VMS™ Program be established?

A core differentiator between Planet Forward and our competition is our ability to oversee Vendor Management Programs. Planet understands the value of centralizing the candidate matching process and developing a CoEmployment solution to streamline the management of resourcing process. The PlanetOne VMS™ Program provides management of the complete recruitment life cycle including: administration, requirement delivery, requisition development and submission, rate monitoring, time and expense reporting, workflow and auditing/logging capability. In addition to our secure, online management solution to streamline the process, Planet Forward dedicates staff to support both the requirement definition process and vendor selection process to ensure an unbiased and cost-effective mechanism for acquisition of specialized energy resourcing. Planet Forward's model provides a reduction in the cost of acquiring a qualified consultant and removes the administrative burden of self-managed and decoupled resource acquisition. It also provides a third-party recommendation for the most appropriate candidate matching.

The PlanetOne VMS™ Program also consolidates the process and eliminates the cost creep and challenges surrounding quality management by implementing programs to limit preferred vendors. In turn, increasing the quality of consultants and reducing the risk associated with contractor utilization. Everyone knows the phrase 'Knowledge is Power.' The information and data collected via the PlanetOne VMS™ Program enables full cost comparison, vendor comparisons, quality checks and the knowledge needed to make informed decisions.

Planet can schedule Vendor Audit Workshops to perform a process assessment and provide a high-level roadmap to establishing the PlanetOne VMS™ Program.
